A compression platform was installed at Thebaud, the central processing plant for the Sable Offshore Energy Project.

**Scope of Work**

The compression platform connects by bridge to Thebaud’s central processing facilities. Cahill provided the Hook Up and Commissioning (HUC) scope, which included:

- Final construction for all structural, mechanical, piping, electrical and instrumentation including hook up and carry over.

- Insulation and coatings.

- Multi-discipline commissioning and pre-start supports for all process and utility systems.

**Highlights**

- Completed on time and on budget.

- Developed and executed work packages for all offshore HUC activities.

- Integrated HUC personnel in the planning phase of the offshore campaign at the fabrication yard in Okpo, Korea.

- Developed project coordination procedures, which were approved by DSME and ExxonMobil.

- Created extensive materials management plan to support project schedule.
